

Immunity Circle

A 60-minute offline session on spotting AI-generated misinformation. No internet, no media-literacy background, no need for TrueTell's creators to be in the room.

GROUP SIZE: 6-25 people, in teams of 3-5 · TIME: 60 minutes · MATERIALS: this guide, the printed scenario cards, one pen per team, a wall or floor space to post team answers

WHAT THIS SESSION DOES

It gives a group the same five-question method as TrueTell Digital — SEE-IT — but delivered through discussion and printed scenario cards instead of a screen. By the end, every participant should be able to name the five questions from memory, and every group should have practiced applying them to a real, documented case of AI-generated misinformation.

YOU DON'T NEED TO BE AN EXPERT

This guide includes everything you say and everything you need to know. Every scenario card comes with an answer and explanation on its bottom strip — read it once before the session so you're not learning it live, but you don't need any prior background in AI or media literacy to run this well.

Session flow — 60 minutes

TIME	SEGMENT	WHAT HAPPENS
0-5 min	The hook	Open with a question, not a lecture: "Has anyone here seen a video, photo, or voice note recently that turned out to be fake — or that you weren't sure about?" Let two or three people share. Don't correct or teach yet — just collect stories. This is what makes the rest of the session feel relevant instead of abstract.
5-15 min	Teach SEE-IT	Introduce the five questions (script on the next page). Say them out loud together as a group at least twice — call and response works well. Write the five letters somewhere visible for the rest of the session.
15-40 min	Case work in teams	Split into teams of 3-5. Give each team 2 scenario cards (one at a time). For each card: read it aloud as a team, run it through the five SEE-IT questions out loud, then vote as a team — genuine or AI-generated — before flipping to the answer strip. Rotate cards between teams if time allows so more groups see more cases.
40-55 min	Group debrief	Bring everyone back together. Ask: "Which case fooled your team? Which SEE-IT question actually caught it?" Go case by case only if time allows — otherwise focus on 2-3 cases that came up most. Use the discussion prompts on each card's answer strip.
55-60 min	Close and hand-off	End with the ask, not a summary: "Next time something in your feed makes you feel something fast — angry, scared, thrilled — that's the moment to run SEE-IT." Tell the group this deck is theirs to keep and reuse, and point them to TrueTell Digital if they have a phone and want to keep practicing.

Facilitator script — teaching SEE-IT

Read this section aloud, in your own words, during the 5-15 minute segment. It doesn't need to be word for word.

"We've all been taught to 'check our sources' — but that advice was built for a time when faking something took real effort. Today, a photo, a voice, or a headline can be generated in seconds and look completely real. So instead of one vague rule, we're going to learn five specific questions. Together, they spell SEE-IT."

S SOURCE Who posted this first — and are they who they claim to be?	E EVIDENCE Does this show up anywhere else, independently?
E EMOTION Is this making me feel something before I've thought?	I INTENT Who benefits if I believe and share this?
T TRACE Can I trace this to where it started, or does it just stop?	

Ask the group to repeat the five words back to you, then ask: "Which of these would you normally skip?" Most groups say Trace or Intent — flag that those are usually the two that catch AI-generated content, because Source and Evidence can be faked too, but tracing something back to its origin and asking who benefits are harder to fabricate convincingly.

RUNNING THE TEAM ACTIVITY

1. Hand each team their first scenario card, text-side up. Don't let them see the answer strip yet.
2. Give teams 4-5 minutes per card: read it aloud, talk through each of the five questions, then vote.
3. Have one person per team flip to the answer strip and read it aloud to their own team.
4. Move to the next card. If you have fewer than 8 cards worth of time, prioritise cases 1, 5, 7, and 8 — they cover the widest range of format (image, audio, disclosed AI, and a scam pattern relevant to daily life).

After the session

KEEP THE CONTENT CURRENT

The eight cases in this kit are real, documented, and already public — we didn't generate any new fakes to build this. But AI misinformation moves fast, so this deck is designed to be refreshed rather than left to go stale. If your group encounters a new piece of AI-generated content worth adding, submit it through TrueTell's monthly case-submission form (linked from the TrueTell website) — accepted submissions become next month's round.

THIS KIT IS YOURS

TrueTell is released under a CC BY licence. Translate the cards into another language, reskin them for your organisation, run this session as many times as you want, and adapt the script freely — you don't need permission, and you don't need us in the room.

IF YOU WANT THE DIGITAL VERSION TOO

TrueTell Digital is the same SEE-IT method as a 10-minute browser quiz, for anyone in your group with a phone and a signal. It uses the same five questions and several of the same real cases, with a score and instant explanations at the end of each round.
